

# Delphi Platform 4CF HalnyX

The most advanced internet platform for  
expert consultations and Delphi studies  
in the world

*The Futures Literacy Company*

# The 4CF HalnyX Delphi Platform

4CF offers consultants and research project managers - who need to quickly transpose expert knowledge into fully verified recommendations access to the most advanced on-line platform for consultations and Delphi studies. Unlike other methods for expert consultations, Halnyx provides a swift consensus as well as the identification and assessment of points of contention even for complex problems. Another beneficial aspect of cooperation with 4CF is the possibility of a full outsourcing of the Halnyx project, including comprehensive analyses - a 360° handling of the project.

S

Access to the tool  
for research teams

Assistance in project  
design

Project implementation  
and coordination

Results report for  
further analysis

M

Access to the tool and

Analysis and  
conclusions

Management of contacts  
with experts and of relevant  
paperwork (protection of  
personal data issues,  
contracts, accounts  
settlement)

# Typical uses of 4CF HalnyX platform

Reaching a swift expert consensus on complex and often controversial issues, such as asset allocation or impact assessment of hypothetical events on the functioning of an organisation

Reviewing legislative drafts and other normative documents with assessments of results

Consultations with individual and institutional stakeholders in spatial or infrastructural planning

Forecasts of the impact of technology on strategic positioning

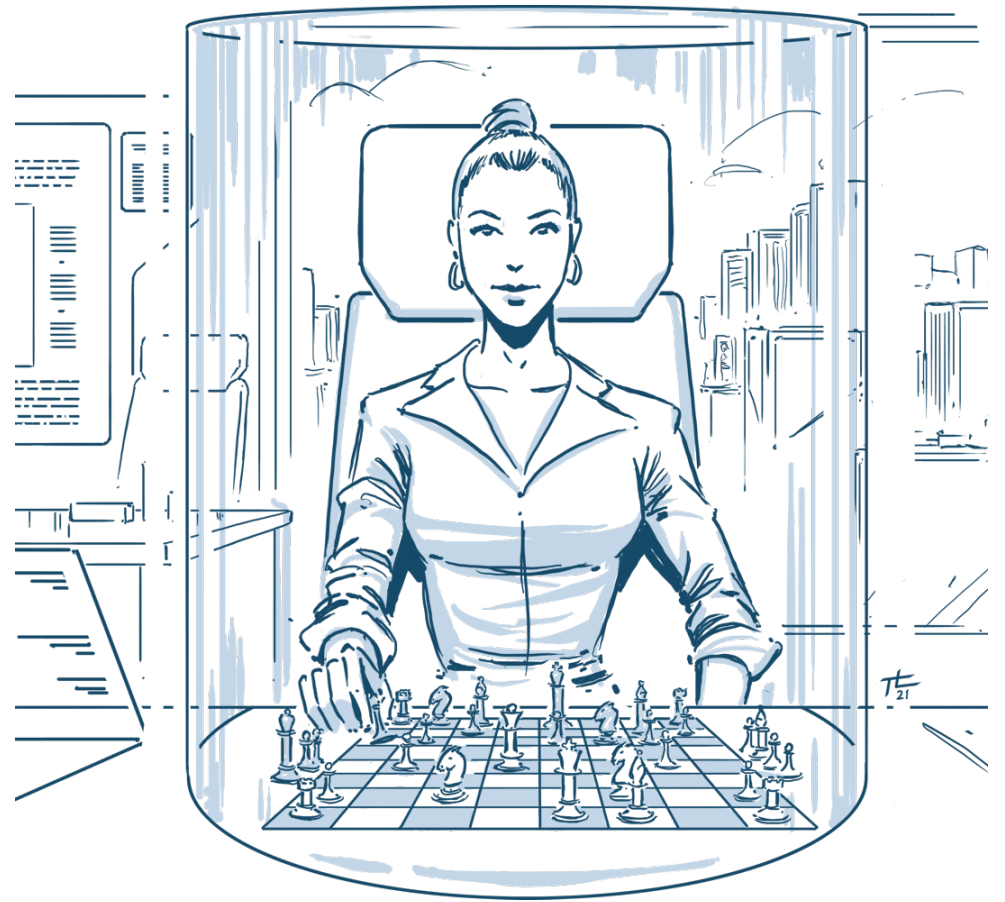

Social participation: consultations with local stakeholders

Strategic foresight

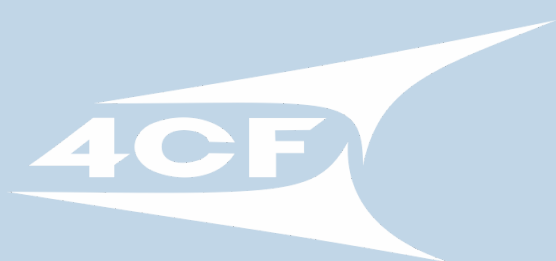

Evaluation

Unlike other widely employed qualitative tools for knowledge management and social studies - such as focus or workshop groups, forums and questionnaires - HalnyX gives research teams the advantage of access to collective intelligence and a solid discussion structure which does not allow for the omission of any crucial information.

Another strength of HalnyX, when compared to traditional Delphi studies, is that it generates information (which enables you to reach the best decisions even in complex contexts) swiftly and automatically.

# Key advantages of our method

The HalnyX platform is a revolutionary tool which improves in a number of aspects on the RAND Delphi method, on the DARPA Real-Time Delphi method and on other approaches to qualitative analyses.

The advantages of the HalnyX platform include:

Instantaneous feedback for user: information about other users' assessments is available in real-time (Real-Time Delphi)

The possibility to complete a study in a time as short as 24 hours

Transparent process structure which leads the experts towards a consensus and facilitates both the analysis and synthesis of the generated knowledge

A discussion enriched by the technical dimension, owing to tools which enable one to work with maps, diagrams and other forms of visualised data

Up to three levels of comments with customisable tags, which allow for a well-organised discussion, and the possibility to predefine comment-assessment methods

An experienced team of analysts which provides support throughout the study process, reliable discussion organisation and conclusion reports

Suitability for both open studies and closed ones (for invited participants)

Focusing expert attention on particular tasks and generating new knowledge: the system reduces information clutter and redundancy which typically accompany group processes

The possibility of adding new questions to a study in progress

The possibility of creating self-generating studies (i.e. studies whose participants are the authors of arguments which are subsequently assessed)

This strategy aims to answer questions of the 'What is the problem?' type.

Increased participant motivation owing to optional elements of gamification

## Selected references

***We have had the pleasure of working with 4CF experts a number of times on projects within the fields of national security and the defence industry, which involved strategy and foresight analyses. The results of these projects as well as the manner of their execution convince me as to the professionalism and innovativeness of 4CF on the Polish market.***
